## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 11-22, drawn to a method for enabling a user to provide input values to a running program before the program needs the input values, classified in class 715, subclass 505.
  - II. Claims 23 and 24, drawn to an execution shell for a mobile program, classified in class 709, subclass 238.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions i and ii are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different functions wherein invention I inserts values entered by a user into a database and invention II maintains routing information regarding a mobile program.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
